 [@ahmad-alqattu](https://github.com/ahmad-alqattu)

+ OBJECTIVE

Passionate software developer with expertise in full-stack development, mobile applications, and backend services. Eager to apply my skills in building robust, scalable solutions and delivering value through innovative software engineering.

+ EDUCATION

B.Sc. Computer Science | **Birzeit University** (2020 – 2024)

+ EXPERIENCE

Software Developer | **Al-Ameen Technology** (2023 – Present)

Develop custom scripts and desktop applications to meet project requirements. Provide support, monitor for servers, and contributed to the development of the .NET-based eMunicipality project.

Full Stack Intern | **Equiptal** (June – August 2024)

Strengthened programming skills through reading technical articles, and learning industry best practices. developed Twitter clone as a final project using modern development tools

+ SKILLS

- Excellent in Java and Python: Proficient in developing robust applications and services.
- Experienced in Web Services: Spring Boot, Javalin, and .NET Core, knowledge in REST, SOAP APIs.
- Experienced in Mobile Development: Flutter and hands-on React Native and native Android-java.
- Excellent in Database Technologies: MySQL, Microsoft SQL Server, PostgreSQL.
- Experienced in Firebase: Cloud-native database services, real-time DB, Firestore and cloud functions.
- Excellent in Front-End Technologies: HTML, CSS, HTMX, JavaScript, and React.js.
- Knowledgeable in Git: Version control using Git and GitHub for efficient collaboration.
- Linux Knowledge, Docker, Web hosting, Deployment.
- PHP Development: Experienced in building server-side web applications.

+ PROJECTS

Twitter clone: [GitHub](#)

Developed a Twitter clone using Javalin, pebble template, HTMX, Bootstrap, and PostgreSQL, with features like user authentication, tweeting, retweeting and following. Containerized with Docker, and implemented unit tests and integration test using Selenide for QA.

Municipality Project:

Participated in the development of Api for eMunicipalities using .NET Core, dealing with Entity framework, jwt authentication, and using WCF to call the old .NET SOAP API.

Land Settlement Archiving

Developed a Python algorithm to process Excel files for the Land Authority's archiving initiative, focusing on data cleaning and extraction. created JavaFX desktop apps for PDF auditing, merging, and other utilities.

Graduation Project

"رحلتي" – mobile app for Local Tours and Booking Implemented features for tour booking, itinerary planning, and user profile for suggestions, admin panel, group for messages for every tour. using Flutter and firebase firestore, add foreign Api to get weather.
